HACKATHON (DAY 6)

DEPLOYMENT PREPARATION AND STAGING ENVIRONMENT SETUP

Hosting platform:

- Linked GitHub repository to the hosting platform.
  - Use platforms like Vercel for quick deployment.
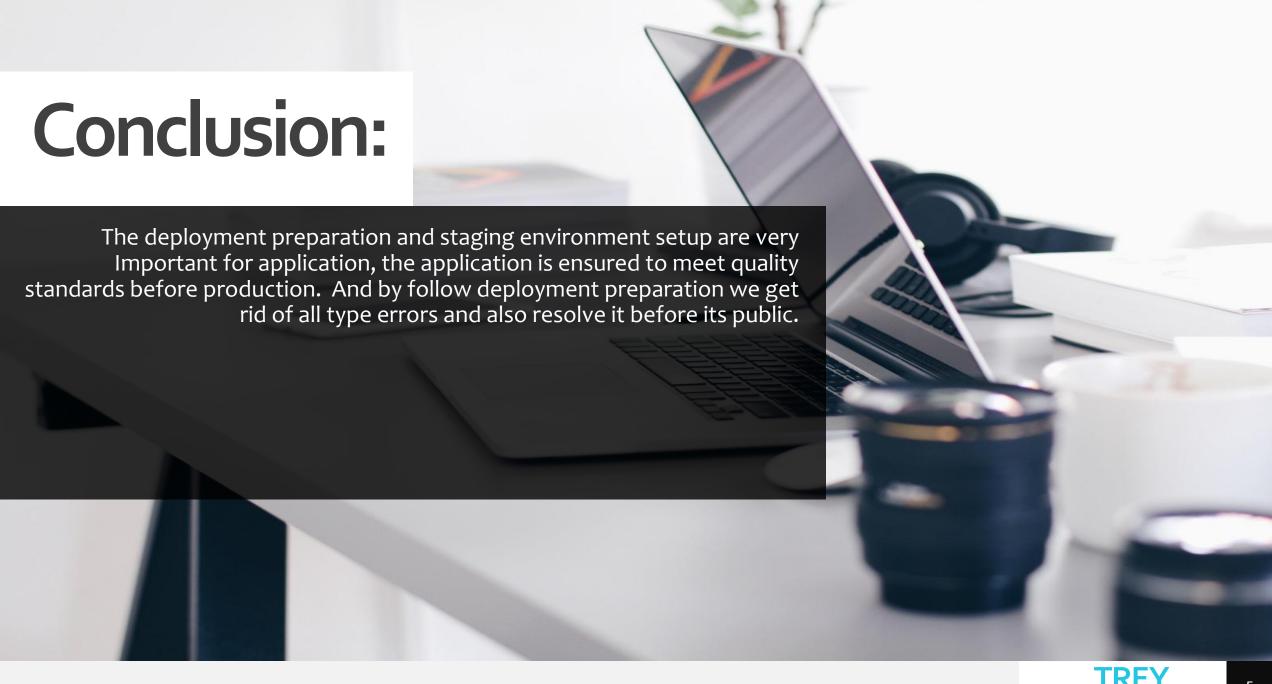

TREY
research

Configuration of Environment Variables:

- Created (.env.local) file to save sensitive data and API keys securely. |
  - Used the hosting platform's dashboard to securely add environment variables. |

Staging Process:

- Deployed the application to a staging environment through the hosting platform. |

- Ensures the build process completes without any types of errors. |

- Verified basic functionality in the staging environment. |

Conclusion:

The deployment preparation and staging environment setup are very Important for application, the application is ensured to meet quality standards before production. And by follow deployment preparation we get rid of all type errors and also resolve it before its public.

THANKYOU!
